International environmental law is an area of international law where states have decided to cooperate with each other in order to fulfil certain goals of common interest and, for the most part, its rules and principles belong in the category of the international law of cooperation. This chapter discusses the most important parts of international environmental law and its main legal sources. It presents the fundamental principles of international environmental law, including those that seek to prevent damage to the environment and those that seek to ensure a balanced approach to environmental protection. It provides an overview of the most important parts of the substantial regulation in international environmental law, including the legal regime for the protection of the atmosphere, the conservation of nature and the regulation of hazardous substances. It also discusses features related to implementation and enforcement that are particular to international environmental law.
10. International environmental law
